

Clean Clothes A-plenty

Gainaday

Washer

Wringer

Economical

The Gainaday earns more than its cost the very first year, although it keeps on working for you for many years.

\$3 to \$4 each washday is saved even if you have been doing the washing yourself—for the conserving of your strength alone will add years to your health and youthfulness. Your Gainaday Electric Washer-Wringer must be considered an investment, never an expense. It should become part of your economy program for 1921.

Gainaday Mechanical Advantages

Any-Position Wringer	Handy Switch Button (no reaching up to turn current on or off)
Revolving, Reversing Zinc Cylinder (5 turns each way)	
Automatic Friction Drive (no fuses can blow out)	Enclosed Working Parts (no belts or pulleys at all)
Copper, Rust-proof Tub	Steel Construction
	Safety Releases
	Double-swivel Casters

Washer

Wringer

Trustworthy

Once upon a time folks washed their clothing by beating the soiled pieces with sticks, rubbing them over rocks, or letting them dangle in the current of a nearby stream.

It was the only way they knew how to do it!

Later on, man developed better ways—the washboard being a well-known example. Here, as in the older methods, cleansing was done by friction which naturally worked a hardship on the clothes and hands.

Since then has come electricity, and the modern cylinder washer. Clothes washing has become more scientific. Friction, in the shape of corrugations or other rough surfaces, has been proved not only unnecessary but actually harmful to the clothes.

In the Gainaday Electric Washer-Wringer science is given full sway. Without fear of fine lingerie being clawed to pieces by the fixings of heavier garments, without fear of the loss of buttons—and perfectly confident of getting immaculate results, Gainaday Owners turn out spotless washings week after week.

Simple

The reasons for Gainaday cleanliness are as simple as its construction—in fact, they go hand in hand.

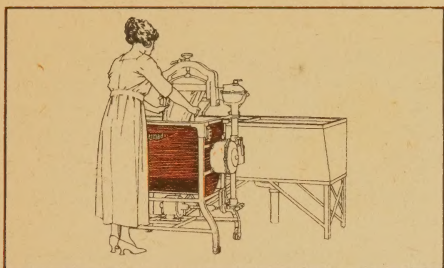

Instead of bending over a washboard, Mrs. Home Manager presses the Gainaday switch button. Instantly the sturdy cylinder begins to revolve, then reverse—five turns each way—carrying the clothes through hot soapy water to the top, then dropping them again and again, squeezing out the dirt through the impact of their fall.

No chance of clothing tearing or wearing or coming out any way but thoroughly, carefully cleansed.

And there is safety for the Gainaday operator, too. There are no belts or pulleys to catch the clothing of children or operator—nothing exposed that moves! It means "safety first" every minute it operates.

From Washer to Rinse Water

Gainaday washing is done with quickness and dispatch. After a few minutes' revolving and reversing of the zinc cylinder, the clothes, spotlessly cleansed, are wrung by power into the rinse water.

From Rinse Water to Blue Water

Here is shown the advantage of the Gainaday any-position wringer. The clothes are easily wrung from rinse water into the blue water. Meanwhile a second batch of clothes is being cleansed in the washer.

From Blue Water to Basket

The clothes are now being wrung from blue water into the basket, all ready for the line. When the first batch is hung up to dry, the second batch of clothes will be ready for the rinse water. No operations repeated—no hard work.

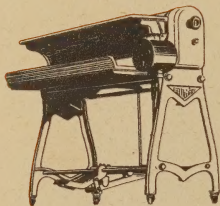

Cleanses Everything as Gently as You Ordinarily Wash a Fine Lace Waist

THE Gainaday washes everything washable. Users no longer send table linens, blankets, rag or bath-room rugs to outside sources for cleansing. Dish towels are equally easy for the Gainaday.

Best of all is its gentleness of operation. Its scientific way puts the loosening of grease and dirt up to the hot water and soap—the Gainaday cylinder completes the operation, in the best possible way.
